

DUAL FORCE 2190

AN INTERCONNECTED, NO-COMPROMISE SOLUTION

Security takes on a whole new meaning with the 2190 Deadbolt/Latch by Adams Rite, the industry's first interconnected deadbolt and deadlatch for narrow stile aluminum doors. The 2190 provides the functionality of a full mortise lock in a narrow stile package, while meeting the most stringent building egress requirements.

Features

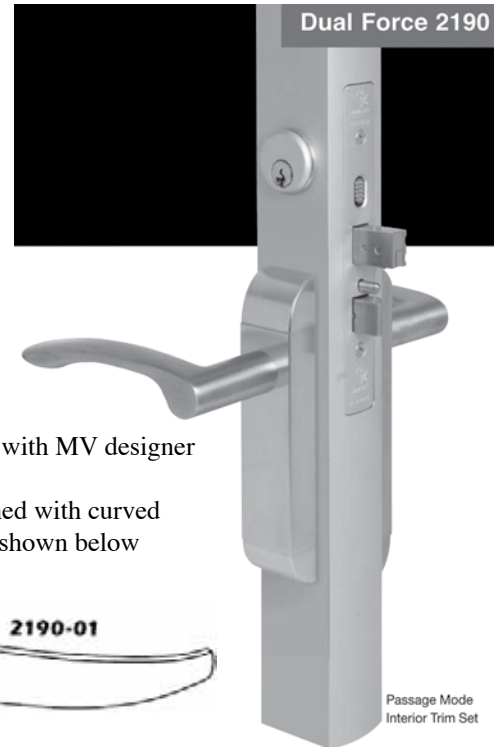

- Electrified lever option for access control
- Re-handable
- Clutched exterior lever trim
- Passage-mode lever sets available for interior aluminum doors
- FaceStyle adaptable faceplate system
- Retrofits to MS® prepped doors
- Key controlled extension of deadbolt and latch holdback

Its no-compromise design offers the best of both worlds: the convenient access control capabilities of a latch with the rock-solid security of a deadbolt. The device operates with a smooth, single motion release via a lever. Even when the deadbolt is projected, the inside lever retracts both the latch and deadbolt simultaneously – providing fast, easy and panic-proof exiting

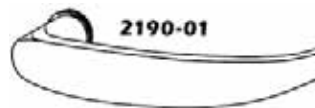

Positive latching also prevents wind and HVAC loads from keeping doors propped open – conserving heating and cooling energy while reducing the impact on the environment and lowering energy costs.

In today's world of heightened security concerns, access control of commercial buildings is paramount.

Step up your narrow stile security with the Dual Force 2190.
