

Introduction

A Key Control Program That's Right For You

Not every user has the same key control needs. That's why Medeco has designed different key control programs and different keyways to meet a wide range of security specifications and key access requirements.

Commercial Program

The Commercial Program is designed for consumers who need Medeco locks primarily for protection against picking, drilling and other forms of physical attack. Keys may be obtained from any Medeco locksmith without specific authorization.

Card Programs

These programs are for users who need key duplication protection in addition to protection against physical attack. Authorized key holders are issued a card with embossed control data and a space for their signature. To obtain duplicate keys, authorized card holders present the card to a participating Medeco locksmith. The data and signature is verified and a duplicated key can then be issued. A Card Program is ideal for consumers, businesses and institutions that plan to issue authorization cards to more than one person or need keys and service available nationwide.

Dealer/Service Center

This program offers instant local service for additional keys in addition to duplication protection and attack resistance. Consumers, businesses, manufacturers and institutions simply return to the locksmith or security provider from whom they purchased the locks. Keys are duplicated immediately after ownership and authorization have been verified.

End User Program

The End User program is for large businesses and institutions that have their own locksmith on staff and that want to produce Medeco keys within their own facility. This program offers individualized control over key duplication procedures. A strict written contract with Medeco is required to prevent unauthorized key duplication or proliferation.

Factory Program

This program is for customers, businesses, manufacturers, and institutions that want the highest level of control in addition to Medeco's exceptional attack resistance. Additional keys are only available from the Medeco factory and only with the proper signature.

Fundamentals of the Carded Program:

Medeco's voucher and electronic controlled Card Programs Policies and Procedures (Levels II and V) are designed to ensure that users get the maximum key duplication protection and convenience, in addition to protection against physical attacks. Only users with an authorized card may obtain duplicate keys for their Medeco locks. These programs are also made to provide the assurance to the authorized card holder that he or she is the only authorized agent able to request additional authorization cards for other users or to transfer the authorization to another in cases of the user leaving the business or institution. Key control programs that utilize a "credit card" type card to assist in proper authorization of duplicate keys include SKY, GLD, NUK, Patriot, Liberty, Gotham, DND and KeyMark Silver.

10 Series Rim & Mortise Cylinders Retrofit Cylinders: Mortise Cylinders

Medeco® mortise cylinders have threads on the outside of the shell and are designed to be screwed into other manufacturer's mortise lock cases. A cam on the back of the cylinder operates the lock mechanism and a set screw holds the mortise cylinder in place. Medeco rim cylinders are used with auxiliary rim locks such as: surface mounted deadbolts, night latches, panic devices and jimmyproof locks (also know as vertical dropbolts or interlocking deadbolts).

Rim cylinders are held in place with a back plate and two mounting screws.

10 series, rim and mortise cylinders, are UL437 listed for drill and pick resistance, and the those that incorporate the Biaxial® design, offer utility patented key control.

Features & Benefits:

- Large variety of cylinder lengths and cam/tailpiece configurations provide excellent retrofit capability and reduce the need to replace the entire locking device.
- Utility patented key control, (for cylinders that incorporate the Medeco3 design), provides protection against the unauthorized duplication of keys.
- A special elevating and rotating pin tumbler design, along with false slots on the bottom pins, mushroom top pins and a sidebar mechanism, work together, to provide superior pick resistance.
- Angled cuts on the keys, along with fore and aft positioning, and the reciprocal slider of the Medeco3 design, provide added dimensions that dramatically increases key combinations and enables Medeco to produce some of the largest master key systems in the industry.
- Hardened steel inserts, positioned in critical areas of the cylinder, provide a high degree of drill resistance.
- Solid brass construction provides high quality and long cylinder life.
- 8 different finishes provide an extremely close color match with existing hardware.
- UL-437 listing provides assurance that cylinders meet universal standards for drill and pick resistance and resistance against other types of forced attack.
- Set screw pin chamber caps allow quick and easy pinning and re-keying without the need to take the cylinder apart.
- 2 year warranty offers assurance of product quality and factory support in the rare event there is a problem.

Key-In-Knob Cylinders
20 Series

Medeco® Key-In-Knob cylinders are designed to retrofit knob type cylindrical locksets, lever type cylindrical locksets, padlocks and bored type auxiliary deadlatches and deadlocks. 20 series, Key-in-knob cylinders are UL437 listed for drill and pick resistance, and the those that incorporate the Medeco3 design, offer utility patented key control.

Features & Benefits:

- Over 100 different cylinder designs and tailpiece configurations enable Medeco to offer the largest retrofit capability in the industry. More retrofit cylinders means fewer replacements of the complete lockset.
- Lock cylinder packages, that contain one cylinder and a variety a tailpieces, provides greater retrofit capability, while at the same time, reduce the amount of inventory required.
- Utility patented key control, (for cylinders that incorporate the Biaxial design), provides protection against the unauthorized duplication of keys.
- A special elevating and rotating pin tumbler design, along with false slots on the bottom pins, mushroom top pins and a sidebar mechanism, work together, to provide superior pick resistance.
- Angled cuts on the keys, along with fore and aft positioning, and the reciprocal slider of the Medeco3 design, provide added dimensions that dramatically increases key combinations and enables Medeco to produce some of the largest master key systems in the industry.
- Hardened steel inserts, positioned in critical areas of the cylinder, provide a high degree of drill resistance.
- Solid brass construction provides high quality and long cylinder life.
- 8 different finishes provide an extremely close color match with existing hardware.
- UL437 listing provides assurance that cylinders meet universal standards for drill and pick resistance and resistance against other types of forced attack.
- 2 year warranty offers assurance of product quality and factory support in the rare event there is a problem.

Retrofit Cylinders: Deadbolt Cylinders

All locks are not created equal. Medeco® cylinders provide a high degree of security by incorporating special design features inside each cylinder. Medeco cylinders offer superior pick resistance, excellent resistance against drilling and other forced attacks, large number of combinations and a utility patent to protect against unauthorized key duplication.

Pick Resistance

Pick resistance is accomplished through the use of specially designed pins that must be elevated and rotated to an exact position in order for the lock to operate. False slots on the sides of the pins, along with mushroom shaped top pins, and with the incorporation of the reciprocal slider mechanism, further enhance the cylinder's pick resistance.

Drilling Resistance

To resist drilling, hardened steel inserts are used to protect critical areas of the plug face, shell and sidebar. Additional drill resistance is provided by hardened steel rods inside the bottom pins and selective use of hardened steel top pins.

Unauthorized Duplication

Protection against the unauthorized duplication of keys is accomplished through the use of strong utility patents and strict factory key control policies. Additional restriction on key cutting occurs due to fact that a special key cutting must be used to accurately reproduce the critical angled cuts on a Medeco key.

MEDECO CYLINDERS

Interchangeable Core

Medeco® interchangeable core locks are designed so that cores can quickly and easily be changed by non-technical personnel by using a special control key. Locks can, in effect, be “rekeyed” without having a working knowledge of the lock or without having to take the lock apart. Medeco interchangeable core cylinders are available in a variety of different sizes, formats and security levels. Cores are available to fit into rim and mortise cylinders, key-in-knob locks, padlocks and bored auxiliary deadlatches and deadbolts. For replacement Best® style small format interchangeable core cylinders, see Medeco’s KeyMark® product line.

Features & Benefits:

- Cylinders can quickly and easily be changed by using a special control key which will remove the core from the lock housing. A core with a new combination can then be inserted and the lock will then effectively be “re-keyed”. All of this can be done without having to take the lock apart which reduces the expense of calling outside service personnel to perform routine lock “re-keys”.
- The 32 series interchangeable core cylinders
- have the control/locking lug positioned at the middle of the core. This provides additional protection against dent puller attacks.
- The 32 series uses coordinated cuts between the operating

keys and the control keys which eliminates the need for build up or control pins and simplifies pinning.

- Utility patented key control, (for cylinders that incorporate the Medeco3 design), provides protection against the unauthorized duplication of keys.
- A special elevating and rotating pin tumbler design, along with false slots on the bottom pins, mushroom top pins and a sidebar mechanism, work together, to provide superior pick resistance.
- Angled cuts on the keys, along with fore and aft positioning, and the reciprocal slider of the Medeco3 design, provide added dimensions that dramatically increases key combinations and enables Medeco to produce some of the largest master key systems in the industry.

- Hardened steel inserts, positioned in critical areas of the cylinder, provide a high degree of drill resistance.
- Solid brass construction provides high quality and long cylinder life.
- UL437 listing (32 series only) provides assurance that cylinders meet universal standards for drill and pick resistance and resistance against other types of forced attack.
- 2 year warranty offers assurance of product quality and factory support in the rare event there is a problem.

KeyMark Overview

The KeyMark product line features cylinders with the unique, utility patented Security Leg™ keyway and patent protected key blanks to fight unauthorized key duplication. Medeco® developed the KeyMark line for installations that called for strict key control but do not demand high level pick and drill resistance. KeyMark products include features to resist pick and impression attacks, but KeyMark cylinders are not UL Listed.

Medeco's extensive line of KeyMark products includes conventional rim, mortise, knob, and interchangeable core cylinders that quickly and easily retrofit many manufacturers' locks. In addition to retrofit cylinders, the KeyMark line includes strong padlocks and deadbolt locks.

Medeco Cylinders

Commercial Maxum Deadbolts

Exceeds ANSI Grade 1 standard for auxiliary locks. Solid brass, free turning collar and 1/4 inch diameter mounting bolts resist wrenching, prying and hammering attacks. 1 inch throw hardened steel bolt resists sawing and crowbar attacks. Hardened steel inserts and rotating pins provide drill and pick resistance according to UL 437 standard. The Medeco3 design offers a utility patent that provides protection against unauthorized key duplication.

MAXUM DEADBOLTS Features & Benefits:

- Bolt mechanism designed to accommodate both mortise and drive-in applications, which provide greater flexibility and ease of installation.
- Solid brass collar spins under pressure to prevent wrench attacks.
- Large thumbturn provides ease of use by physically challenged individuals.
- Steel shroud over bolt protects against “ice pick” type attacks.
- High security strike plate has a special box design with 2” screws that anchor the strike directly to the building structure behind the frame, preventing “kick-in” type attacks.
- Hardened steel bolt and bolt throwing mechanism are surrounded by a heavy-gauge tubular steel housing for maximum resistance to crowbar attacks.
- Solid brass design is secured with high-tensile steel mounting bolts for maximum resistance against hammer and prying attacks.
- Utility patented key control, (for cylinders that incorporate the Medeco3 design), provides protection against the unauthorized duplication of keys.
- A special elevating and rotating pin tumbler design, along with false slots on the bottom pins, mushroom top pins and a sidebar mechanism, work together, to provide superior pick resistance.
- Angled cuts on the keys, along with fore and aft positioning, and the reciprocal slider of the Medeco3 design, provide added dimensions that dramatically increases key combinations and enables Medeco® to produce some of the largest master key systems in the industry.
- Hardened steel inserts, positioned in critical areas of the cylinder, provide a high degree of drill resistance.
- 8 different finishes provide an extremely close color match with existing hardware.
- UL437 listing provides assurance that cylinders meet universal standards for drill and pick resistance and resistance against other types of forced attack.
- 2 year warranty offers assurance of product quality and factory support in the rare event there is a problem.

Finishes

- 05 - (605) Bright Brass, clear coated
- 09 - (609) Satin Brass, blackened, satin relieved, clear coated
- 24 - (624) Dark oxidized statuary bronze, clear coated
- 26 - (626) Satin Chromium plated over nickel

Functions

- 0 = S/C: Single Cylinder. Cylinder x Thumbturn
- 2 = D/C: Double Cylinder. Cylinder x Cylinder

Residential Deadbolts

Beautiful solid brass hardware for discriminating tastes.

Features & Benefits:

- Double-locking action makes Medeco locks virtually pickproof
- UL 437 high security deadbolt
- One inch hardened steel bolt to resist sawing
- Hardened steel inserts provide the utmost resistance to drilling
- Solid brass collar spins under pressure so a wrench is ineffective
- Solid brass construction secured with high-tensile steel bolts.
- Finishes: Anti-tarnish Polished Brass (05), Oil-rubbed bronze (10), Antique Brass (09), Satin Nickel (19)

Cam Lock Kits

Medeco cam locks set the standard for security in 3/4" diameter locks. Medeco® high security cam locks are recognized throughout the world as the standard for protection. No other utility lock can be compared with Medeco's proven track record of security and long term reliability. Medeco cam locks utilize hardened, stainless steel inserts throughout the cylinder to provide the ultimate defense against drilling, pulling, and other forms of vandal attack.

Offering hundreds of cam and cylinder length configurations, Medeco can fit nearly any application requiring a 3/4" diameter lock. These locks are available keyed alike, keyed different, or master keyed, and offer patented key control programs to prevent the unauthorized duplication of keys and maintain system integrity.

These versatile high security locks are frequently found on safes, gun cabinets, medicine storage areas, vending and other coin operated equipment, slot machines and on other OEM applications.

Medeco cam locks can be found in casinos around the world. In many cases, they are the only locks that meet the stringent requirements for gaming equipment.

576-3015	60T1450T-KIT-26-DLT	1-1/2"	\$101.76

Applications:

Medeco high security cam locks can be used in any standard 3/4" diameter application and a multitude of markets including:

- Safe Banking
- Communication Utility
- Alarm Data Encryption
- Furniture
- Access Control Locker
- Cabinet Pay Telephone
- Transit Laundry
- Vending

Certification:

UL 437 Listed

Technical Information:

Three, four, and five pin models available depending on size. Available in standard sizes from 7/16" to 2". Two flat models available, key retaining only. Clockwise or counterclockwise rotation, 90° or 180°. Keyed alike, keyed different, or master keyed.

Finishes:

626 brushed chrome finish standard. Other finishes available, depending on volume.

Switch Locks

Medeco 3/4" diameter switch locks offer a wide range of electrical functions with the physical security and patented key control of a Medeco cylinder. Available in either single or double switch models, Medeco switch locks are ideally suited for applications requiring controlled access to electrically activated systems, including alarms, ATMs, time delay safes, encryption devices, heavy power equipment, control panels, and electrically access doors and gates. Switch locks use a five pin cylinder to maximize keyed different and master keying capabilities. Medeco design and engineering resources are available to assist customers with special functional requirements.

The Medeco unique design provides triple locking action, making the locks virtually pick proof. All Medeco keys and locks are protected under patent, trademark, and copyright laws. Medeco3 keys may only be duplicated by Medeco or by a Medeco authorized sales outlet, and only at your request.

Benefits:

- * Available in single or double switch models, momentary and maintained positions.
- * Silver or gold contacts (for low amperage applications) designed to accept quick connect leads.
- * Hardened stainless steel inserts inside the cylinder provide the ultimate defense against drilling and other forms of physical attack.
- * Unique elevating and rotating tumbler pin system is virtually pick proof.
- * Patented Medeco keys may only be duplicated by Medeco or an authorized Medeco service outlet, and only at your request.

- * Medeco switch locks are completely serviceable, and can be re-keyed in case of lost or stolen keys.
- * Medeco switch locks can be keyed in with other 60 series products (10 series products may be keyed into existing 60 series systems)
- * Locks can be keyed alike, keyed different, or master keyed depending on your specific needs.

Applications:

Can be used to retrofit many 3/4" diameter application including:

- * Heavy Power Machinery
- * Time Delay Safes
- * Material Handling Equipment
- * Construction Vehicles
- * Electrically Accessed Gates
- * Cash Control Systems
- * Encryption Devices
- * Alarms
- * Control Panels
- * ATMs

Warranted for two years against manufacturer's defects. See Medeco limited Warranty for full details.

Certification: * Lock - UL 437 Listed * Switch - UL Registered, CSA Certified.

Technical Information

- * Five pin, 3/4" double "D" mounting standard.
- * Available in either single or double switch models with silver or gold contacts.
- * Rated at 7 amps resistive at 125/250 VAC.
- * Contacts designed to accept quick connect leads (AMP connector number 60598-3).

Finishes: * 26 brushed chrome finish standard.
